

SAFE OPERATIONAL USE OF CAPTIVE-BOLT DEVICES: CHECKLIST

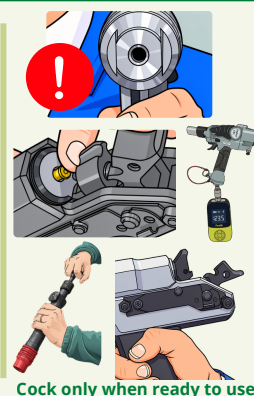

1 PRE-USE INSPECTION

- **PPE.** Use PPE where required.
- **Structural inspection.** Check casing, trigger assembly, bolt and muzzle for cracks, dents or other signs of wear.
- **Bolt check.** Check bolt retracts and moves smoothly.
- **Exhaust check.** Check exhaust vents are clear of debris, grease or carbon.
- **Pre-test device (Cartridges).** Use suitable test materials. Do not dry fire.
- **Pre-test device (Pneumatic).** Attach air/gas source and test.
- **Power selection.** Select right cartridge/PSI for device and type of animal.

2 SAFE USE & LOADING

- **Device control.** Always keep the muzzle pointed away from you and others.
- **Breech inspection.** Ensure chamber is clear of spent casings or obstructions before loading.
- **Load cartridge or set powersource.** Insert correct cartridge into chamber immediately before use, or connect pneumatic powersource.
- **Safety & cocking.** Prepare the firing mechanism appropriately for your device **only** when **animals are securely in position** and **you are ready** to apply the device. Never move around with a loaded device.

3 APPLICATION

- **Restraint.** Ensure animal's head is properly secured.
- **Target.** Position the muzzle at correct position and angle for species.
- **Discharge.** Activate the device.

4 POST-STUN PROCEDURES

- **Bolt retraction.** Verify bolt has fully retracted.
- **Unload casings.** Open breech away from your face and safely remove spent cartridge.
- **Device check.** Check device before using again.

CHECK UNCONSCIOUSNESS BEFORE BLEEDING

- ✓ Loss of posture
- ✓ No corneal reflexes
- ✓ No rhythmic breathing

MISFIRES

Use a back-up stunner immediately to re-stun.
Wait 30 seconds before opening misfired device.
